

• LIQUID FACELIFT •

• Is a Liquid FaceLift safe? •

Dermal fillers and anti wrinkle neurotoxin injectables are the most often performed aesthetic treatments and have excellent safety records. Complications are extremely rare and our skilled injectors make it even safer to receive these injectable treatments.

• Does the procedure hurt? •

No. Treatment is comfortable and the treatment area is numbed before injections. Any minimal discomfort lasts only a few minutes.

• What is the recovery or downtime? •

Recovery involves some swelling and a feeling of pressure that lasts 1-3 days. Bruising is possible and clears as any other bruises do. Bruising can be covered with make up and does not typically interrupt daily activities.

• What can I do to maintain or further my results? •

- Top it off -periodically receiving a syringe or so of dermal filler allows you to avoid problems associated stemming from volume loss such as wrinkles, crepey skin, flattened contours, sagging and laxity. We suggest that patients have the first top off 9 months later to best keep the results.
- Xeomin® injections every 3-5 months to keep new wrinkles from forming.
- Vampire FaceLift® done yearly can maintain healthy volumized tissue by replacing lost volume with filler and restimulating growth and production of your own tissue with PRP.
- Xeomin® injections regularly at 3-5 month intervals keeps certain facial muscles from creating creases, folds and deep wrinkles.
- Obagi® NuDerm Transformation Skincare keeps skin more clear and healthy.
- Tretinoin, a prescription strength retinoid, works on the DNA of the skin cells to increase collagen and elastin production and speed cell turnover.
- SPF-Avoid unprotected sun exposure and UVA rays which break down underlying tissue and cause loss of volume, elasticity and youthful contours.
- Vampire Facial® +RF, Vivace® RF Microneedling, and lasers intentionally initiate the body's healing response to stimulate skin to grow, produce collagen and elastin, increase natural hydration to maintain more youthful skin, tighten pores, and reduce laxity.

• How do I begin? •

The practitioner will determine if a Liquid FaceLift treatment is recommended after discussing your rejuvenation goals with you . We will discuss possible options to achieve your goals and needs. Then, you can begin your treatment by scheduling your treatment for a convenient date. A deposit will be required to book and secure your treatment appointment.

RESTORE VOLUME, SMOOTH AND RESHAPE

SCHEDULE TODAY - LOOK BETTER FAST!

• REFILL •

Is gravity pulling your face down?

Is aging robbing you of youthful contours leaving you looking older than you feel?

Do you want to replace a lot of the volume you lost over the past decade or more to fill under eye hollows, flat or sunken cheeks, deep nasolabial folds, heavy creases around the mouth, sagging corners of the mouth, and significant jowl drooping?

Have you avoided aesthetic treatments to replace lost volume over the years for fear of looking overdone and unnatural while the problem got worse?

Or has replacing small amounts of volume not achieved the revolumized and refreshed anti-aging result you are seeking?

If you aren't ready for or don't ever want a surgical facelift...then a Liquid FaceLift may be just what you need to achieve your goal—supple, radiant, natural looking makeover safely with almost no downtime and no recovery.

• Why choose a Liquid Facelift? •

Face lifts will always have a place in facial rejuvenation. The results can last up to 10 years, and they give good results for people who have severely sagging skin. But in recent years, there has been an increasing trend away from face lifts and towards non-invasive techniques because they are less expensive, give more natural-looking results, have minimal down time, and are much less risky with fewer complications.

• What is a Liquid Facelift? •

A Liquid FaceLift is designed to give you a smoother, more youthful appearance. It's a 1-2 visit procedure that combines multiple treatments, and it's intended to mimic the effects of a traditional face lift, including skin smoothing, but without surgery.

• REJUVENATE •

• Is a Liquid FaceLift Right for You? •

A combination of non-invasive aesthetic treatments strategically target problem areas of the face. Whether your cosmetic concern is facial volume loss, furrowed brow lines, crow's feet or other bothersome wrinkles, injectables can work restorative wonders on the face. If you're interested in a comprehensive, nonsurgical approach to dramatically rejuvenate your appearance, a Liquid FaceLift may be just the thing for you.

• What is included? •

LIQUID FACELIFT MINI:

- 3 syringes of dermal filler
- up to 120 units of Xeomin®
- up to 4ccs Platelet Rich Plasma / PRP
- 1 Dermaplaning Facial or Obagi® Radiance Chemical Peel

LIQUID FACELIFT MAX:

- 6 syringes of dermal filler
- up to 120 units Xeomin®
- up to 5ccs Platelet Rich Plasma / PRP 5cc
- 1 Dermaplaning Facial or Obagi® Radiance Chemical Peel

• What can a Liquid FaceLift treat? •

Through a combination of anti wrinkle injectables and dermal fillers, a Liquid FaceLift can dramatically improve your appearance and erase years of aging. If you have vertical lip lines, crow's feet, brow lines or volume loss in your face, you may be a great candidate for a Liquid FaceLift. An experienced injector with a keen understanding of facial anatomy can customize your Liquid FaceLift according to your specific needs.

• What is the procedure? •

The Liquid FaceLift is a 2 appointment procedure. Appointment #1, your skin is prepped with a Dermaplaning Facial or an Obagi® Radiance Chemical Peel and the anti wrinkle injectable is injected. On Appointment #2, dermal filler and PRP are expertly injected into individually customized areas to smooth, reshape and fill lost volume.

• REFRESH •

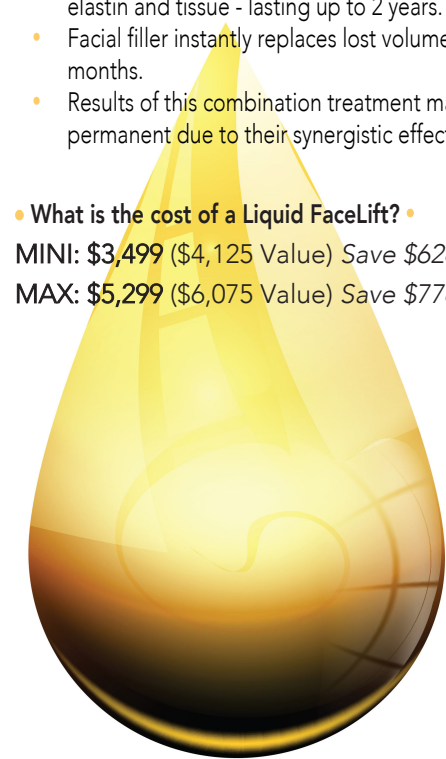

• What are the benefits? •

- Xeomin® injections relax and prevent wrinkles by stopping muscle movement for 3-5 months. Regularly repeated treatment prevents new wrinkles from forming and smoothes existing wrinkles.
- PRP triggers stem cells to produce new collagen, elastin and tissue - lasting up to 2 years.
- Facial filler instantly replaces lost volume for up to 18 months.
- Results of this combination treatment may be more permanent due to their synergistic effects.

• What is the cost of a Liquid FaceLift? •

MINI: \$3,499 (\$4,125 Value) Save \$626

MAX: \$5,299 (\$6,075 Value) Save \$776
