

P-SHOT® AND ERECTILE MEDICATIONS

Often, medication is no longer needed. If Cialis or Viagra is needed, these medications should now work better for you or you should require a lower dose.

P-SHOT® AND ERECTILE FUNCTION

The PRP in the **P-Shot®** contains growth factors that rejuvenate existing blood vessels, and stimulate the production of new blood vessels. The result is significantly improved blood flow to the penis, and good blood flow is essential to erectile function. The increased circulation restores your ability to achieve longer, stronger, more sensitive and sustainable erections.

P-SHOT® AND PEYRONIE'S DISEASE

If you have Peyronie's Disease, the **Priapus Shot®** --highly effective and virtually painless treatment -- can help with a series of three treatments spaced 6-8 weeks apart. No longer will your sex life suffer the pain and embarrassment of Peyronie's!

WILL THE P-SHOT® INCREASE PENIS SIZE?

While PRP improves blood flow, the **Priapus shot®** stimulates the growth of new cells in erectile tissues. Increases in length and girth are not uncommon. But this treatment is not to be expected to increase size.

WHAT DOES THE P-SHOT® COST?

The **Priapus Shot®** procedure cost is \$1,900. Your hand pump with pressure gauge is included with your initial session. We accept financing through CareCredit.

IS THE P-SHOT® COVERED BY INSURANCE?

For the most part, the **P-Shot®** is an elective procedure, and therefore not covered by health insurance. Rather than looking at the **P-Shot®** price, you really need to consider its relative value over other ED treatments. Since the results of the treatment can last for a year or more, the **P-Shot®** price is more cost effective than prescription ED medications, which need to be refilled over and over again. As compared to male enhancement surgery, this male enhancement shot is less expensive and it is pain-free. And unlike invasive penile implant surgery, the **P-Shot®** for men requires no downtime.

"At 5 weeks the results are good. Erection quality is now very strong and penis has noticeably grown in size. My wife is pleased."

Anonymous December 3, 2017 at 4:08 pm

"Just had my second shot. The first one added firmness and about 1/8 in length and 1/4 in girth. I've ED for about 30 years off and on. I highly recommend it. I use in conjunction with viagra and pumping."

Anonymous on June 27, 2016 at 8:19 pm

"Have had two p shot procedures...and can definitely feel and see the difference. I'm 56, very active and in good shape. I don't smoke or drink in excess, but over the past few years getting and maintaining an erection was becoming more difficult and just wasn't like it was when I was younger. Also, length and girth just wasn't what it used to be. My wife suggested several months ago that she wanted to do the O shot and for me to do the P shot together. All I can say it was a very pleasant experience... and I never felt uncomfortable. My wife and I have found that excitement again and our sex life is amazing. I mean really amazing. And my penis is back like it was, maybe a little longer and thicker, when I was in my twenties."

Contemporary Health Center offers the most effective regenerative treatments available to restore and maintain the highest quality of life for our patients.

We refuse to believe that declining sexual ability or ED is an inevitable part of aging. **P-SHOT®** is a safe and effective way to preserve men's sexual health.

-Reclaim sexual wellness

-Enhance erectile function

-Increase sensitivity

STRONGER...

LONG LASTING...

INTENSIFIED... ERECTIONS!

Many men are concerned with how they perform in the bedroom when sexual function has declined or become troubling. This is the reason why Viagra, pills, creams and even surgery are popular among men. But for those who are looking for a clinically proven procedure designed to enhance erectile function, firmness, stamina and sensitivity, all without the use of dangerous drugs or surgery, **P-Shot®** is the one for you.

WHO WOULD BENEFIT FROM A P-SHOT® TREATMENT?

- Has your sex drive diminished through the years? ·
- Do you wish to enlarge or strengthen your penis? ·
- Has your sensation decreased? ·
- Are you currently experiencing difficulty in attaining or maintaining erections? ·
- Are erectile medications not working as well as they used to or do you need higher doses to achieve a satisfactory erection? ·
- Do health conditions make erectile medication an unsafe option for you? ·

What is the P-SHOT® / PRIAPUS SHOT®?

The secret is Platelet Rich Plasma, PRP, and a patented injection protocol. Treatment involves isolating the highest concentration of platelets from your blood and injecting those super-charged platelets back into precise areas of your penis.

The concentrated platelets release growth factors called cytokines and chemokines which stimulate the growth of new blood vessels and induce collagen production.

This very powerful stem cell stimulating therapy takes sexual performance to a different level by stimulating angiogenesis (new blood vessel formation), new, younger tissue growth, and increasing blood flow and circulation to the organ, resulting in stronger, longer, and more sustainable and sensitive erections.

PROVEN RESULTS MEN CAN EXPERIENCE AFTER RECEIVING THE P-SHOT®:

- Strengthens the penis and erections
- Men who have had the **P-SHOT®** have gone up as much as 5-points on the 25 point erectile function scale.
- Enlarges the penis – The **P-SHOT®** can result in increases of length and girth of the penis. Patients have reported increases of up to 20%.
- Increases circulation within the penis for a healthier organ
- Reduces the refractory period (time between erections)
- Improves effectiveness of other therapies (such as Viagra®)
- Increases sensation and pleasure
- Greatly improves sexual stamina
- Makes other therapies, if needed, more effective
- Straighten the penis

HOW IS THE P-SHOT® / PRIAPUS SHOT® PERFORMED?

We begin the **P-Shot®** procedure by numbing the penis. A small blood sample is taken from your arm- similar to a simple blood test. PRP is separated using the highest quality PRP centrifuge. A few drops of calcium chloride solution activate the platelets. Using a very thin needle, the growth factors of PRP are quickly, precisely and painlessly injected.

HOW LONG DOES THE PROCEDURE TAKE?

The **P-Shot®** won't take a lot of your time. This advanced procedure is performed in 5 minutes and there is no downtime. The entire appointment takes 45 minutes. Go back to your usual routine immediately after your **P-Shot®**.

WHEN WILL I FEEL RESULTS AFTER THE PRIAPUS SHOT®?

Men usually enjoy the effects days after the procedure. The full effects are achieved in 3 months. 80% of men treated report benefits from the **P-Shot®**.

HOW LONG DO RESULTS OF THE P-SHOT® LAST?

Results are long lasting. Most men see benefits for 12-18 months.

IS THE P-SHOT® PAINFUL?

No. The penis is fully numbed for the quick treatment.

WHAT IS THE RECOVERY?

The **P-Shot®** is a quick, simple in-office procedure, and there is no downtime. You can potentially experience minor swelling, light bruising, and minimal discomfort during the first 24-48 hours.

ARE THERE SIDE EFFECTS FROM THE P-SHOT®?

PRP is natural and comes from your blood, so there are little or no known side-effects.

HOW MANY TREATMENTS ARE RECOMMENDED?

1 treatment produces results that are satisfactory for most men. If erectile function is severely impaired, improvements may be sufficient after 1 treatment or additional treatment may be desirable to achieve more results. Maintenance treatment is recommended in 12-18 months, or when benefits decrease. Some men prefer to have treatment every 6-12 months because the benefit is so great. The individual recommendation for therapy can be determined at your initial treatment.

P-SHOT® AND ACOUSTIC WAVE ERECTILE THERAPY

We highly recommend Acoustic Wave Erectile Therapy for treating erectile issues, dysfunction, and normal aging. These treatments can be combined for even more results.

P-SHOT® AND PENILE PUMP PROTOCOL

P-SHOT® is proven to show results alone but it is most often recommended to follow treatment by use of a penile pump for 20-30 minutes per day for 6 weeks. This protocol has been shown to be most effective. It is important that the pump have a pressure gauge and a pressure of ONLY 7-10 is used to be beneficial and not harmful. Some men may be contraindicated for pump use. This will be determined by the practitioner. If prescribed, an appropriate penile pump is included with the 1st treatment.

P-SHOT® AND TESTOSTERONE THERAPY

Testosterone is essential to optimal erectile function. Testosterone deficiency should be treated with testosterone therapy. The **P-Shot®** procedure works well with testosterone pellet therapy to restore sexual health and function. Sexual dysfunction can be significantly reduced by integrating PRP/**P-Shot®** in combination with other treatment methods.

P-SHOT® AND HEALTH CONDITIONS

P-SHOT® uses your natural PRP; is non-surgical and drug free; is indicated for those with existing health conditions, including prostate issues, high blood pressure, diabetes, heart disease, arrhythmia, etc.
